

Romasafe™ Cordless Roman Shades

using the Romasafe™ Cordless Roman Shade System to make inherently child-safe Roman Shades.

The Romasafe™ System is ideally suited for use with any typical sunscreening or blackout roller shade fabric. It can also be used with many drapery fabrics to make flat, pleated, and hobbled style Roman Shades. This page features a cordless pleated shade made with Sheerweave 5000 shade fabric. Other Romasafe shade styles are pictured on the following pages.

Romasafe™ Cordless Shades are completely cordless. They use sleek aluminum pleat battens, clear polycarbonate band guides, and clear UV treated polyester bands to lift the shades into neat folds.

The lift bands wind up into an elegant, covered cassette. Manual and motorized lift mechanisms are available.

Romasafe™ Cordless Shades offer:

- *Unlimited choice of pleat spacing.
- *Pleats without pinpricks of light.
- *Easy to operate spring-loaded lift mechanisms – precisely matched to the size and weight of the shade.
- *A wide range of motorization choices including battery powered, solar powered, and 110 volt AC powered.

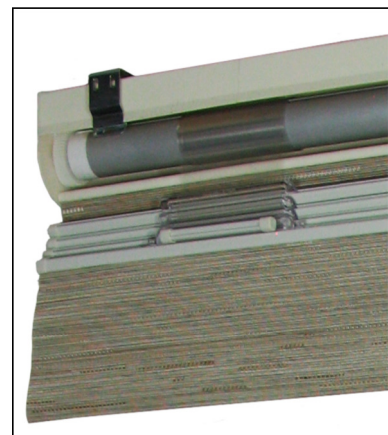

The patent-pending band guides are made from clear polycarbonate and self-align in the back channels of the aluminum pleat battens.

The patent-pending cassette positions the shade close to the window while allowing the bands free access to the lift mechanism. The shade fabric wraps around the front to cover the cassette.

Universal spring-clip brackets allow easy, snap-on installation.
